TITLE: IMAGE DATA TRANSFER SYSTEM, CAMERA INCORPORATED RECORDING/REPRODUCING
DEVICE AND SERVER

APD:

19980818

FPAR:

SOLUTION: On the side of a transmitting side camera incorporated VTR 1, a transfer command means 1b specifies the transfer destination of image data picked up by a camera 1a to execute a transfer command. A transmission means 1c transmits the image data and the transfer destination data to a network 4 in accordance with the transfer command. In a server 2 for managing the transfer of image data, a receiving means 2a receives the image data and the transfer destination data sent through the network 2. A transfer means 2b transfers the image data to the transfer destination specified by the transfer destination data through the network 4. In an image data reproducing device 3 to be the transfer destination, a receiving means 3a receives the image data transferred from the server 2 and a display means 3b displays the received image data on a monitor 3c.
